Look under system variables and find a variable named path. Click on it

If done successfully it should look like this

Find the correct file path

The normal file path for what we are looking for is
`C:\Program Files\Java\jdk-10.0.1\bin`

But if you can't seem to find it try searching for where java is installed within whatever directory Program Files is in as well as you could have used a custom installation path.

Create a new path

The background features a dark blue grid. Overlaid on the grid is a white line chart with approximately 15 data points connected by thin white lines. The chart shows a fluctuating trend, starting at a low point, rising to a peak, dipping, rising again to a higher peak, and then slightly declining towards the end.
