

Company

The files starter.java, Staff.java, StaffMember.java, Volunteer.java, Employee.java, Executive.java, and Hourly.java are given.

The program illustrates inheritance and polymorphism. In this homework you will add one more employee type to the class hierarchy.

The employee will be one that is an hourly employee but also earns a commission on sales. Hence the class, which we'll name **Commission**, will be derived from the **Hourly** class.

Write a class named **Commission** with the following features:

- It extends the **Hourly** class.
- It has two instance variables (in addition to those inherited): one is the total sales the employee has made (type **double**) and the second is the commission rate for the employee (the commission rate will be type **double** and will represent the percent (in decimal form) commission the employee earns on sales (so .2 would mean the employee earns 20% commission on sales)).
- The constructor takes 6 parameters: the first 5 are the same as for **Hourly** (name, address, phone number, social security number, hourly pay rate) and the 6th is

the commission rate for the employee. The constructor should call the constructor of the parent class with the first 5 parameters then use the 6th to set the commission rate.

- One additional method is needed: `public void addSales (double totalSales)` that adds the parameter to the instance variable representing total sales.
- The `pay` method must call the `pay` method of the parent class to compute the pay for hours worked then add to that the pay from commission on sales. (See the `pay` method in the `Executive` class.) The total sales should be set back to 0 (note: you don't need to set the `hoursWorked` back to 0—why not?).
- The `toString` method needs to call the `toString` method of the parent class then add the total sales to that.

To test your class, update `Staff.java` as follows:

- Increase the size of the array to 8.
- Add two commissioned employees to the `staffList`—make up your own names, addresses, phone numbers and social security numbers. Have one of the employees earn \$6.25 per hour and 20% commission and the other one earn \$9.75 per hour and 15% commission.
- For the first additional employee you added, put the hours worked at 35 and the total sales \$400; for the second, put the hours at 40 and the sales at \$950.

Compile and run the program. Make sure it is working properly
